

Drop and Withdraws for Students Enrolled in MTH124S
(Statistics MTH124 and the corequisite Foundations for Statistics MTH024)

1. If a student drops MTH124S within the first week (before the student are administratively placed into lecture and corequisite components), then that student will be removed from both components (all 5 credit hours).

2. If a student drops after the student has been moved into both components, then the withdraw will depend on what the student wants to withdraw from.

a. If a student wants to withdraw from both components, then the student needs to withdraw from both CRNs (list them separately). This decreases the student course load by 5 credit hours.

b. If a student only wants to withdraw from the lecture component only (which is allowed), then the student needs to withdraw from the lecture CRN only. This decreases the student course load by 3 credit hours. That is, the student can stay in the corequisite component only.

c. If a student only wants to withdraw from the corequisite component (this is **NOT** allowed), then the student will be withdrawn from **BOTH** components (both CRNs will be removed from the student's course schedule). This decreases the student course load by 5 credit hours. That is, the student **CANNOT** stay in the lecture only.
