

## OSS008 – WORLD REGIONAL GEOGRAPHY

<b>Credit Hours:</b> 3 Semester Hours
<b>Pre-Requisite:</b> None
<b>Related TAG:</b> Geography
<b>General Course Description:</b> This course serves as an introduction to the study of regional geography at the global scale. Students will become familiar with and understand the use of maps/geo-technologies to explain geographic phenomena and patterns as they relate to world regions and their interrelationships, apply geographic concepts to the study of regions or a specific region, compare and contrast human and physical patterns and their variations over space, develop an appreciation of the complexities of regional and global environmental and socio-economic problems, understand globalization and place local issues in their global and historical context, and to understand human-environment interactions in various regions around the world.
A minimum of 70% of the following Student Learning Outcomes must be met.
1. Understand the use of maps/geo-technologies to explain geographic phenomena and patterns as they relate to world regions and their interrelationships.
2. Apply geographic concepts to the study of regions or a specific region.
3. Be able to compare and contrast human and physical patterns and their variations over space.
4. Develop an appreciation of the complexities of regional and global environmental and socio-economic problems.
5. Understand the concept of globalization and be able to place local issues in their global and historical context.
6. Understand human-environment interactions in various regions around the world.
